### **NEWS UPDATES:**

**DNREC, CLEAN AIR COUNCIL AND DUPONT ANNOUNCE AIR QUALITY INVESTMENTS IN NEW CASTLE; ELECTRIFIED OUTLETS AT TRINITY DISTRIBUTION SERVICES IMPROVE QUALITY OF LIFE FOR NEIGHBORS** - Neighbors of Trinity Distribution Services in New Castle are benefitting from an environmentally-friendly project that improves air quality and the quality of life for residents in neighborhoods adjacent to the facility. Twenty diesel generators used to power refrigerated storage containers at the company's Roger Road site have been replaced with electrified outlets, significantly reducing air pollutants, diesel fumes and noise in the community. The project was made possible by an agreement between the Delaware Department of Natural Resources and Environmental Control (DNREC) and DuPont, under which DuPont, as a condition of its Delaware Coastal Zone permit, funded this project to offset air emissions from two new boilers at the DuPont Edge Moor facility in Wilmington. The project will eliminate up to 120 tons of harmful air pollutants annually from the Trinity site and produce significant health and environmental benefits for the community. Under the agreement, DuPont provided \$225,000 to replace Trinity Distribution Service's diesel generators with electrified outlets and an additional \$25,000 to fund technical and administrative oversight of the project by the Clean Air Council through its diesel pollution reduction program. This project complements the state's ongoing efforts to reduce diesel emissions, including projects funded by EPA and grants made available through the Diesel Emissions Reduction Act. The Site Investigation and Restoration Section (SIRS) invites public comment on a proposal to clean up the 1000 East 12th Street- Habitat for Humanity Site at 1000 East 12th Street in Wilmington. The 0.9 acre Site is currently covered with buildings, vegetation and a weathered asphalt. The soil is contaminated with several polycyclic aromatic hydrocarbons (PAHs) and metals. The groundwater is contaminated primarily with iron and manganese, and arsenic was detected in only one monitoring well. The proposed future actions include additional soil delineation; as necessary soil removal of hot spot areas; abatement of all asbestos containing material; removal of all USTs and ASTs; installation of a cap/cover system made up of hardscaping and/or a minimum of two feet of DNREC-approved fill over marker fabric; a DNREC approved Contaminated Material Management Plan and a Site Specific Health and Safety Plan; placement of an Environmental Covenant; and a Long Term Stewardship Plan with annual inspections. The Site is within the existing City of Wilmington Groundwater Management Zone which prohibits any use of groundwater. The comment period ends on January 3, 2012.
